MEDICREA Receives FDA Pediatric Clearance for PASS® LP Systems

The MEDICREA group (FR0004178572-ALMED), listed on Alternext by NYSE Euronext Paris, a medical company specialized in the development of innovative surgical technologies for the treatment of spinal pathologies, announced today the FDA approval of the PASS® LP system for the treatment of adolescent idiopathic scoliosis. The PASS® LP is the lowest profile pedicle screw spinal fusion system available on the market and has been designed to address the most complex spinal pathologies making it specifically adapted to pediatric indications.

“Medicrea is deeply committed to advancing care for scoliosis patients and we have developed technologies like PASS LP to put new capabilities into the hands of surgeons who treat the most complex spinal deformities” stated Denys SOURNAC, MEDICREA’s President and CEO. “ We are extremely pleased to announce the approval for this new indication.”

The PASS® LP thoraco-lumbar fixation system allows connection of the rod at a distance from the spine and performs a 3D correction of the deformity through gentle and progressive stress distribution on all anchorages using the ST2R technique (Simultaneous Translation on 2 Rods). Through its proprietary derotation connectors & technique, the PASS LP offers a unique way to achieve correction of the deformity in all planes. Derotation in the coronal plane is obtained with no risk of screw ploughing or pull out while preserving sagittal balance, essential in the treatment of adolescent idiopathic scoliosis.
